Subject: RE: Apollo Astronaut, Dr. Edgar Mitchell's, Request for Meeting to discuss Disclosure

Received! Thanks Rebecca. Sorry for the delay—it's been a heck of a month.

John would likely take this meeting alone first before involving the President, so let me ask him if he can do this in August. He'll be in town Aug 11 – 22. Is Dr. Mitchell planning to be in town then?

P6/b(6)

Thanks,
Eryn

Re: Apollo Astronaut, Dr. Edgar Mitchell's, Request for Meeting to discuss Disclosure

Dear John Podesta:

As we move into the last half of 2014, the need for extraterrestrial disclosure intensifies. Thank you for your kind consideration and response to my email.

This 4 July weekend I will meet with President Obama's friend, Ambassador Hamamoto, at the US Mission in Geneva during their Independence Day Celebration. While in Geneva I will also speak at the UN and the European Space Agency regarding why we must move forward with disclosure and specific programs such as manned moon missions, since some scientists and others are calling for moon colonization due to what they perceive is happening on Earth.

John, with this email I am requesting a conversation with you and President Obama regarding the next steps in extraterrestrial disclosure for the benefit of our country and our planet.

Fifty years ago Battelle, Brookings and RAND studies on UFOs convinced the government to remove knowledge of the extraterrestrial presence from the citizens of our country. These organizations advised with their best information. However, today much, if not most, of the extraterrestrial reality they examined is known by our citizens. These organizations' resultant strategies and policies of 50 years ago no longer hold credibility or benefit.

Five decades of UFO information have dramatically shifted the public awareness of an extraterrestrial presence. And yet, our government is still operating from outdated beliefs and policies. These are detrimental to trust in government transparency, science, religion, and responsible citizenry embracing the next step in our country's space travel and research.

Three disclosure issues are prominent: 1) planet sustainability via next generation energies such as zero point energy, 2) galactic travel and research undertaken as an advanced species aware of the extraterrestrial presence, not as uninformed explorers who revert to colonialism and destruction and 3) the example of a confident, engaged government who respectfully regards the wisdom and intellect of its citizens as we move into space.

I respectfully receive your response to my request for conversation on disclosure.

Warmest Regards,

Edgar D. Mitchell, ScD
